Journal Impact Factor

- In any given year, it is the number of citations, received in that year, of articles published in that journal during the two preceding years, divided by the total number of articles published in that journal during the two preceding years.
- Devised by Eugene Garfield
- Highest impact factor (New England Journal of Medicine >79)

Limitations of impact factor

- Self-citations
- Many times editors insist that authors cite works in that journal
- Some disciplines tend to cite more than others
- Journals change their names thus affecting impact factor for approximately two years
- Does not take into account negative citations

- Not particularly useful for Computer Science since we publish mostly at conferences

Author impact metrics

- Raw number of citations
- H-index: A researcher with an index of h has published h papers each of which has been cited by others at least h times
- Highest h-index in Computer Science held by Anil Kumar Jain (183 as of now!)
- i-10 index: Introduced by Google. # publications with at least 10 citations

Computer Science (& related) associations

- ACM - Association for Computing Machinery
- IEEE - Institute of Electrical and Electronics Engineers
- AAAI - Association for the Advancement of Artificial Intelligence
- IACR - International Association for Cryptologic Research

Computer Science conferences by area

- AAI - Artificial Intelligence
- ACL - Natural Language Processing
- CHI - Human-Computer Interaction
- CIKM - Knowledge Management
- CVPR - Computer Vision
- CRYPTO - Cryptography
- FOCS - Theory
- FSE - Software Engineering
- ICCV - Computer Vision
- ICML - Machine Learning
- ICSE - Software Engineering
- IJCAI - Artificial Intelligence
- INFOCOM - Networking
- KDD - Data Mining
- NIPS - Machine Learning
- OSDI - Operating Systems
- PLDI - Programming Languages
- PODS - Databases

Computer Science conferences by area

- RECOMB - Computational Biology
- SOSP - Operating Systems
- S&P - Security
- STOC - Theory
- SIGCOMM - Networking
- UIST - User Interfaces
- SIGCSE - Computer Science Education
- VLDB - Databases
- SIGGRAPH - Graphics
- WWW - World Wide Web
- SIGIR - Information Retrieval
- SIGMETRICS - Performance
- SIGMOD - Databases
- SODA - Theory

The list is non-exhaustive

Eye-tracking analysis of user behavior in WWW search

[LA Granka](#), [T Joachims](#), [G Gay](#) - ... of the 27th annual international ACM ..., 2004 - dl.acm.org
We investigate how users interact with the results page of a WWW search engine using **eye-tracking**. The goal is to gain insight into how users browse the presented abstracts and how they select links for further exploration. Such understanding is valuable for improved ...

Identifying fixations and saccades in eye-tracking protocols

[DD Salvucci](#), JH Goldberg - ... of the 2000 symposium on Eye tracking ..., 2000 - dl.acm.org
The process of fixation identification—separating and labeling fixations and saccades in **eye-tracking** protocols—is an essential part of **eye-movement** data analysis and can have a dramatic impact on higher-level analyses. However, algorithms for performing fixation ...

Eye tracking: A comprehensive guide to methods and measures

[K Holmqvist](#), [M Nyström](#), R Andersson, [R Dewhurst](#)... - 2011 - books.google.com
We make 3-5 **eye** movements per second, and these movements are crucial in helping us deal with the vast amounts of information we encounter in our everyday lives. In recent years, thanks to the development of **eye tracking** technology, there has been a growing ...
