

CS 181S Project Peer Review Form

Name:

Instructions: For each other group, pick one user story that team is delivering for their project. For that story, do your best to determine whether their team has completed that functionality in a (i) bug-free and (ii) secure manner. For “bug-free”, try to find any kind of behavior that robust software shouldn’t exhibit: unhandled exceptions, incorrect output, etc. For “secure”, try to find any kind of behavior that their threat model permits yet would violate their security goals. Be sure to ask clarifying questions, request demos of particular inputs, or request to look at relevant parts of the source code as necessary to evaluate your chosen use case. Document below what the story is and any problems you find.

Team 1:

User story :

Team 2:
